Profile

I'm a Python Software Developer with three years of experience. I have extensive experience in web development (backend), data analysis, processing, and calculation, writing scripts to automate various processes.

I have experience in designing database models using PostgreSQL relational databases and non-relational MongoDB. And I use Docker to deploy applications and various services.

At the same time, I'm studying javascript and the popular ReactJS frontend library. I have a good base and understanding of work.

Main Skills

- Python
